DETOX TREATMENT	8
REVITALIZATION TREATMENT	8
DNA TEST	8
RADIOFREQUENCY	11
CAVITATION TREATMENT	11
IPL	11
CRYOLIPOLYSIS TREATMENT	12
STEM CELLS BANKING	12

## AESTHETIC MEDECINE

### BOTOX TREATMENT

The botulinum toxin, known, as Botox, is particularly effective in preventing and treating wrinkles of the forehead, around the eyelids and the glabella, the space enclosed between the two eyebrows which tightens facial expression. The most common medicine known containing botulinum toxin is Botox ®.

Result: The skin remains smooth and relaxed, the face is rejuvenated.

Price: from 950 CHF

---

### PRP TREATMENT

The Platelet Rich Plasma is a very powerful skin booster. It aims to induce skin restoration by dermal stimulation through the injection of patient's own plasma rich in platelet growth factors. In addition to skin restoration, PRP is used to prevent hair loss (alopecia and moderate baldness) and to treat keloid scars, stretch marks and the treatment of dark circles around the eyes.

Price: from 950 CHF

## MEDICAL TREATMENTS

### DETOX TREATMENT

The Detox treatment removes toxic deposits from your system. Under medical surveillance a deep analysis is done beforehand by a blood test in order to understand your specific needs. A tailored treatment based in vitamins and anti-oxidants will be administered. This powerful treatment will clean your body in order to get it ready for the next step.

Price: 15'000 CHF

---

### REVITALIZATION TREATMENT

This treatment is the logical step after a detox treatment. The aim is to revitalize your cells in order to boost your body, mind and soul. In some cases it can be done without a prior detox program, requiring a complete medical examination and blood test.

Price: 15'000 CHF

---

### PROGRAM (DETOX & REVITALISATION)

The program begins with an early morning complete blood test. The tests can also be performed at the patient's departing city some time before coming to Aesthetics Clinic. The treatment starts with the infusion of powerful antioxidants depending on individual's needs. During the following days a control blood test is performed to measure the treatment's success.

Duration of the program: 2 days

---

### DNA TEST (PERSONALIZED NUTRI-GENETICS)

These state of the art tests based on a saliva swab allows to read your DNA helping to identify your genetic strengths and weakness thus preventing serious disease. The tests are called 'DNA Performance' and 'Salus'. Our practitioners will determine which one (or both) are suitable to fit your needs.

Price: from 2'500 CHF

## LASER TREATMENTS

### SKIN TIGHTENING BY RADIOFREQUENCY

This technique is a combination of radio frequencies and magnetic pulses which tightens the skin. This synergistic effect is due to the heat produced on the poles of the hand piece which is transferred to the body in the areas to be treated.

Price: 500 CHF/ area

---

### CAVITATION TREATMENT

Cavitation is an innovative and non-invasive and painless technique that reduces cellulite as well as localized fat (adipocytes) through a low-frequency ultrasound. This does not require any anaesthesia or convalescent time.

Price: 500 CHF/ area

---

### IPL

This treatment uses a powerful pulsed light that is applied directly to the skin. The light penetrates the surface of the skin and becomes heat. The target is melanine or hemo-globine which is destroyed, without damaging the neighbouring tissues. The IPL uses several filters allowing to treat several conditions, among them vascular lesions, rosacea, erythrosis, angiomas, aging spots, hyperpigmentation. It is also effective for a durable hair removal.

Price: 500 CHF/ area

## FAT REMOVAL WITHOUT SURGERY

### CRYOLIPOLYSIS TREATMENT

Cryolipolysis is a new medical treatment design to remove localized fat deposits. This technology freeze the fat deposits through the skin in a controlled manner. This procedure can dissolve 30% of the fat avoiding the need to undergo a surgical liposuction.

Price: 2000 CHF/ area

---

## STEM CELLS THERAPY

### STEM CELLS BANKING

Use of stem cell: We believe this is the future in medicine. We can store stem cells in a bank and use them in the future if needed. For example, in the case of undergoing radio and chemotherapy for a cancer, fresh cells can be withdrawal from the frozen storage and used with the help of tissue engineering (a laboratory specialized in stimulation the cells into a new line).

The cells can also be used in association with fat to improve certain skin affections as burns, skin atrophy, scaring, etc. Thanks to research, science is advancing at promising speed in the use of stem cells.
